

## Cooperation agreement Arbórea-Caja Rural

Minister of Agriculture, Food and Environment Isabel García Tejerina with Aracnóptero

**Caja Rural de Salamanca and Salamanca company Arborea Intellbird S.L. Developer of the system remotely manned Aracnocóptero, signed an agreement to apply this disruptive technology to improve the agriculture system in our region**

ARBOREA INTELLBIRD SL, a company participated by Iberdrola and CDTI is located in the Science Park of the University of Salamanca in the Hispanic-Portuguese Agricultural Research Center (CIALE), and integrates first class investigators in the primary sector applications.

Arborea design and manufacture RPAS, train operators and provide inspection services.

Aracnocóptero platform brings great value as an innovative and disruptive technology for remote sensing and diagnostic for various areas like agriculture, livestock and forestry.

CAJA RURAL DE SALAMANCA commitment to promoting innovation and the modernization of the agricultural world livestock needs to increase the professional field control, the nature and condition of crops, as well as the products you obtained, and in a special way, to get the knowledge and experiences of the land owners that will result in greater social and economic empowerment of the sector in the region.

Arborea has the ability to develop specific systems for generating improvements in the primary sector holdings based on the air detection and enable greater efficiency in sinister related insurances in agriculture.

Caja Rural de Salamanca and Arborea, presented at the Salamanca 2014 Fair, this technology, in order to CRSA partners and customers as well as professional sector of our community can test the application.

Aracnocóptero and Caja Rural de Salamanca focus their efforts sets to increase economic and productive growth, promoting maintenance and improvement of an agricultural activity compatible with a sustainable development.
