

Representatives from Enusa and Arbórea meet to analyse Collaboration Possibilities

A demonstration of the Aracnocóptero platform took place this morning at the Juzbado factory

Tuesday, 11th of June 2013. Representatives from Enusa Industrias Avanzadas, S.A. and the Salamanca-based firm Arbórea met in the Juzbado factory this morning to attend a demonstration of the operation of the aracnocóptero platform. The highly sophisticated unmanned aircraft, developed by Arbórea ,which is located in USAL's Science Park, caught the attention of the directors of Enusa.

Enusa is a company interested in revamping its procedures and innovation in new technologies, which is precisely why they first contacted Arbórea. Aside from being a leading company in the development unmanned aircrafts, it is also based out of Salamanca, which would be an important factor in a potential collaboration. In addition, the University of Salamanca's role through the Science Park has enormously aided and put into motion highly specialised capacities such as these.

The principal objectives of today's meeting were see the operation of the aracnocóptero up close and explore the possible applications of this platform in the Enusa factory.
