

**January 26, 2018**

**Arborea Intellbird** sponsors one more year **CIVILDRON**, the reference meeting in civil applications of drones.

There, Carlos Bernabéu, CEO of Arborea, presented with great expectation the company's latest patent focused on a new conception of non-destructive tests for the detection of deep structural damage in large infrastructures.

The disruptive system is based on a structural digital ultrasound from a drone and is inspired by the food detection mechanisms of Madagascar's AyeAye lemur.
